

Message from the SE4Science 2018 Co-Chairs

Welcome to the 2018 International Workshop on Software Engineering for Science, co-located with the 40th International Conference on Software Engineering. This workshop contains two types of papers: full papers and short papers covering work-in-progress and experience reports. The submissions covered a wide array of topics at the intersection of software engineering and scientific computing. After a thorough review and discussion process, the program committee and organizing committee accepted four full papers and two short papers for inclusion in the program. We thank the SE4Science program committee for their efforts, as well as the ICSE2018 Workshops Chairs, Paul Grünbacher and Dimitra Giannakopoulou, and ICSE2018 Proceedings Chairs, Barbora Buhnova and Patrizio Pelliccione, as well as all the ICSE2018 Organizing Committee.

The primary goal of this workshop is to facilitate the interaction among researchers from domains who do not usually have the opportunity to interact. As a result, this workshop always generates interesting and lively discussions. We expect that the papers accepted for this year's program will provide the necessary context and discussion points to once again have interesting and productive discussions. The organizing committee is committed to devoting a significant portion of the workshop time to small and large group discussions. Due to the large amount of time devoted to discussion, we encourage participation from interested researchers who do not have a paper on the program.

More information about this workshop, and previous workshops, can be found at <http://www.se4science.org/>.
